GD121 Assignment #1

You will take two pre-existing images and combine them to create a final composite image. Find two separate images of a man and woman in the stock images @ gettyimages.com. The login for gettyimages is:
U: ainycstudent
P: Passw0rd

Using the adjustment techniques, alpha channels, and layer masks we discussed in class, separate the individuals from their respective backgrounds. Place them together on one background seamlessly. They can be added together on a third image as a background or one may be shifted to the other image. The focus of this assignment is separating the individual cleanly from their background using a layer mask so the separation is non-destructive.

You will turn in a folder containing at least three images.
- The new composite image
- The first source image
- The second source image

The folder should be named **class+lastname+AS01**. For example a student named John Smith would turn in a folder called **gd121smithAS01**. No spaces in the folder name. Place that folder into my Dropbox (jsullivan) before the beginning of class next week.(week 4)
