

## GD260 week 3 class notes

Review of website folder structure:

Rootfolder

images

CSS

js

Using the site definition file to manage site- The site definition file (.STE) can be created so that you don't have to tell Dreamweaver what all the paths are for the site each time you open the application. After the .STE file is made, you can import the site information from Site->Manage Sites.

Creating HTML files in Dreamweaver

Creating CSS files in Dreamweaver

Linking CSS files to HTML files in Dreamweaver

Adding rules to your CSS file and implementing those rules in your HTML file

Creating <div> tags in Dreamweaver

Using id tags in your <div> for layout purposes (Example: <div id="container"> creates a unique identifier called container that can be used the start your layout)

Editing CSS rules in Dreamweaver
