

MM205 Final

You will turn in your completed 4 page website. The four pages you are expected to have are:

- An index page- This will be the first page visitors see when coming to your site. There should be introductory information here
- A bio page- this page should include your resume and any other pertinent information
- An image gallery- there should be an image gallery of at least five(5) images. The gallery should taken advantage of either of the two javascript gallery plugins you were exposed to during the quarter unless you take advantage of some other interesting methods for displaying your images. At minimum you should have a reasonable and useful thumbnail/fullsize image relationship.
- A contact page- your contact information should reside here. Since we are not hosting these pages live, I am not expecting the php to work, but a bonus to you if it is setup correctly.

Turn in:

Your root folder should be named MM205+lastname+FIN. For example, a student name John Smith would turn in a root folder called MM205smithFIN.
